## CTR 550 E

| Max. log diameter | 550 mm |
| :--- | :--- |
| Max. opening betwen blade guides | 400 mm |
| Max. elevation of blade | 465 mm |
| Min. log height | 20 mm |
| Max. depth of cut | 200 mm |
| Max. log lenght (standard model) | $3,6 \mathrm{~m}$ |
| Length track section | $2,25 \mathrm{~m}$ |
| Min. log length | $0,9 \mathrm{~m}$ |
| Saw blade motor | 4 kW |
| Feeding motor of the arm bridge | $0,18 \mathrm{~kW}$ |
| Max. feed speed (forw/back) | $15 \mathrm{~m} / \mathrm{min}$. |
| Saw blade | $3110 \times 27 \div 35 \times 0,9 \mathrm{~mm}$ |
| Weight (standard model) | 320 kg |
| Weight (track section) | 56 kg |

Nomimal current of circuit breaker is minimally 16 Ampere

## Feed into the cut and back - motor-powered

Arm height adjustment - manual
Control panel - on a mobile bridge

## Log handling - manual

The smallest machine in the offer. It is designed primarily for cutting smaller volumes of lumber. Ideal solution for family farms or small sawmilling companies. Unlike sawmill CTR 550, this model is equipped with mechanical feed into the cut and back with continuous speed control. That greatly increases comfort of the operator and the overall productivity. The feed is driven by an electric motor with worm gearbox controlled by a frequency inverter. You can change the speed of travel simply by turning the potentiometer knob on the control panel. End positions are secured against impact by means of automatic deceleration and stopping. The control panel is placed on a mobile bridge of the sawmill arm. Thanks to that the operator has closer access to the workpiece when cutting. Height is adjusted using a hand crank with adjustable scale.

The solidly mounted drive wheel is driven via a V-belt by a professional electric motor, specially balanced against vibration. The machine's total input power of 4.18 kW guarantees low running costs and easy connection to the mains. Circuit breaker 16 A .

The tensioning wheel system moves in a cast iron guide, which guarantees long service life and precision adjustment even with long-term use of the machine. The arm is fitted with aluminium running wheels with precise anti-vibration balancing. The circumference of the wheel has a recessed groove in which a replaceable rubber-textile V-belt is fitted, which forms the contact surface between the wheel and the saw blade. The stability of the machine is based on solid steel travel sections, which ensure optimum guidance of the sawmill bridge. The travel sections are fitted with tilting angle bars and log clamps/cam dogs.

The CTR 550 E uses standard sawmill blades $27-35 \times 0.9 \mathrm{~mm}$ as with the fully professional models.
The CTR model series represents the latest trends in log-cutting sawmill design, with special emphasis on maximum accuracy and long service life at minimum cost. The machines are designed in an original modular way, which allows easy replacement or adjustment of all main technical nodes and their individual parts. This significantly reduces maintenance costs in the long-term use of the machine and also reduces service times, thus reducing production downtime.

All pictures shown are for illustration purpose only. Actual product may vary due to product enhancement.

## ACCESSORIES - SPECIAL ACCESSORIES

Extending section 2,25m

## Extending section $2,25 \mathrm{~m}$

Include: $3 x$ Cross beams, $1 x$ Tilting angle bar, 1x Clamp
Variable points: 1 x Tilting angle bar, 1x Clamp

START/STOP cooling system Integrated in the cooling system is an electromagnetic through-flow valve, which automatically opens when the saw blade is started and closes when the saw blade is stopped. It substantially lowers the coolant consumption and saves time needed for replenishment of coolant liquid.

## Clamp with tilting angle bar

Additional clamping kit. It consists of the clamp and a tilting angle bar

## Cam dog

For fast and easy squared lumber clamping

## Synthetic Grease LV 2-3

400 g tube for the grease gun.

Saw blade tension indicator

Cant hook

## Additional clamp

## Grease Gun

For regular maintenance of the machine according to the lubrication plan. Metal grease gun for 400 g tubes. Equipped with a flexible pressure hose.

Hard-metal Plate 20 x 0.9 mm

Hard-metal plate $20 \times 0.9 \mathrm{~mm}$

Running wheel V-belt SPB 1500
Driven Wheel V-belt 17x1220 Li

Running Wheel Vbelt SPB 1500
Driven Wheel V-belt B $17 \times 1220 \mathrm{Li}$

## MAXWoad

- The original sawmill blades PILOUS MAXwood are available in a variety of types which enables you to process any kind of wood.
- The wide product range not only offers more affordable sawmill blades for low-volume cutting, but includes also sawmill blades for fully professional cutting and utmost performance.
- The foundation of all sawmill blades are top-quality German materials and precise workmanship. The quality of the sawmill blades is carefully monitored. All sawmill blades correspond to the strict ISO 9001 norm.
- We have added to our portfolio also an original Munkfors sawmill blade made by the world`s leading manufacturer Uddeholm from Sweden.
- Pilous sawmill blades are used in dozens of countries around the world. Any wood you cut, the company Pilous will recommend you a sawmill blade that will fit your needs.

## BiMetal

Sawmill blade with tool steel teeth - completely eliminates the need to sharpen the sawmill blade as well as frequent blade replacement. Use: soft, hard to extremely hard wood.

HSS
Bearing blade

## Stellite

Sawmill blade with teeth made of Stellite. Tooth setting is completely unnecessary. Use: soft, hard to extremely hard wood.

## Carbon spring steel

The most common sawmill blade for optimum price/performance ratio. Use: soft and hard wood.

Be careful when unpacking welded sawmill blades. They are in a shipping container in tensioned condition. Remove the sawmill blade cover only after fitting it onto the machine.
